MPCE-031

ORGANISATIONAL BEHAVIOUR

Complete Topic-wise Revision Notes

All 34 topics from the uploaded EASY NOTES MPCE-031-2026 PDF

How to use these notes	Revision-first format: definition, key concepts, theorists/models, applications and quick recall.
Source boundary	Prepared from the uploaded MPCE-031 Easy Notes PDF only. No outside material has been added.
Exam reminder	Use these notes for revision. Expand each point with explanation and examples when writing long answers.
Source limitation	The uploaded PDF is an exam-topic compilation, not the complete official IGNOU study blocks. Some topics are presented broadly in the source.

Contents

1. Theories of Motivation and Their Implications
2. Models of Organisational Behaviour
3. Morgan’s Organisational Metaphors
4. Definition and Scope of Organisational Psychology
5. Phases of Evolution of Organisational Behaviour in India
6. Work Motivation and Its Characteristics
7. Organisational Commitment and Its Components
8. Steps and Components of Conflict Resolution
9. Vroom’s Expectancy Theory
10. Social Learning Theory

11. 12 C’s for Team Building
12. Phases of Motivation to Increase Morale and Productivity
13. Management and Various Functions of Management
14. Behaviour Intervention Plans and Steps of OBM Programme
15. Various Methods to Create an Effective Team
16. Difference Between Organisational Behaviour and Organisational Psychology
17. Goals of Organisational Behaviour
18. Compare and Contrast: Models of Organisational Behaviour
19. Organisational Behaviour Adopts a Cross-Cultural Approach
20. Differences Between Primary and Secondary Motives
21. Quality Control Circles (QCCs)
22. Features of Job Satisfaction
23. Organisational Behaviour Management (OBM)
24. Kinds of Work Schedules
25. Job Characteristic Model of Work Motivation
26. Work Motivation: Intrinsic and Extrinsic Motivation
27. Organisational Commitment: Nature and Components
28. Herzberg’s Hygiene Factor Theory
29. Maslow’s Hierarchy of Needs
30. Types of Organisations
31. Principles of Managing Change
32. Scope of Organisational Psychology
33. Reinforcement Theory of Motivation
34. Leadership and Factors of Leadership

1. Theories of Motivation and Their Implications

Meaning — Motivation is the force that directs employees towards work goals and influences performance, satisfaction and productivity.

Key points and explanations

- Maslow's Hierarchy of Needs — Abraham Maslow: five levels, usually moving from basic to higher needs: physiological (food, water, pay), safety (security/job security), belongingness (relationships/team), esteem (recognition/respect), and self-actualisation (personal growth). Workplace implication: meet basic needs and provide opportunities for growth.
- Herzberg's Two-Factor Theory — Frederick Herzberg: hygiene factors (salary, policies, working conditions, job security) prevent dissatisfaction; motivators (achievement, responsibility, recognition, meaningful work) create satisfaction. Maintain hygiene and enrich jobs.
- Vroom's Expectancy Theory — Victor Vroom: expectancy (effort can produce performance), instrumentality (performance leads to outcomes), and valence (value of the outcome). Set attainable goals, provide resources and offer valued rewards.
- McClelland's Theory of Needs — David McClelland: need for achievement (success/challenge), affiliation (relationships), and power (influence). Match tasks and roles to dominant needs.
- Practical implication: combine fair pay, growth opportunities, clear performance-reward links and individually suitable tasks. Theories are not universal; adapt to personal and cultural differences.

Quick revision: Maslow = five needs; Herzberg = hygiene + motivators; Vroom = E-I-V; McClelland = achievement, affiliation, power.

2. Models of Organisational Behaviour

Meaning — Organisational behaviour models explain how people, groups and organisational structures interact at work and help managers predict behaviour and improve effectiveness.

Key points and explanations

- Autocratic model: authority and control rest with management; employees comply because of wages or fear of punishment. Useful in some crises, but may reduce morale, creativity and increase turnover.
- Custodial model: management provides economic benefits, welfare and job security. Employees gain security, but may become dependent and less innovative.
- Supportive model: leaders encourage, guide and recognise employees. It supports growth, intrinsic motivation, engagement and creativity; it requires capable leadership.
- Collegial model: managers and employees work as partners towards shared goals. It promotes teamwork, self-discipline and mutual respect; consensus may slow decisions.
- The models represent movement from control towards collaboration. Suitability depends on the situation, workforce maturity, culture and organisational goals; a blended approach may be useful.

Quick revision: Autocratic—power; Custodial—security; Supportive—leadership; Collegial—partnership.

3. Morgan's Organisational Metaphors

Meaning — Gareth Morgan's Images of Organization (1986) presents metaphors as different ways of understanding organisational structure, behaviour and change.

Key points and explanations

- Machine: organisation as a standardised, efficient system; roles and procedures are fixed. Useful in stable routine settings, but may restrict creativity.
- Organism: organisation as a living system adapting to its environment; stresses interdependence, flexibility and survival.
- Brain: organisation as an information-processing and learning system; stresses knowledge, learning and innovation.
- Culture: organisation as shared values, beliefs, norms and meanings that shape behaviour.
- Political system: organisation as a place where interests, power, conflict and negotiation operate.

- Psychic prison: shared assumptions and unconscious patterns can trap members and restrict thinking.
- Flux and transformation: organisation is continuously changing through dynamic processes.
- Instrument of domination: organisations may exercise power and control in ways that disadvantage groups.

Quick revision: Remember all eight: machine, organism, brain, culture, political system, psychic prison, flux/transformation, domination.

4. Definition and Scope of Organisational Psychology

Meaning — Organisational psychology applies psychological principles to workplace behaviour to improve employee well-being and organisational effectiveness.

Key points and explanations

- It studies individual behaviour, motivation, job satisfaction, leadership, performance and mental well-being.
- It applies psychological research and methods to understand employees and work settings.
- Its scope includes recruitment and selection, motivation, leadership, training, organisational culture, stress and performance evaluation.
- It aims to improve the fit between people and jobs, employee satisfaction and organisational productivity.

Quick revision: Workplace application of psychology; employee well-being + organisational effectiveness.

5. Phases of Evolution of Organisational Behaviour in India

Meaning — The source describes the development of organisational behaviour in India through broad historical phases, reflecting changes in management practices and workplace priorities.

Key points and explanations

- Early industrial phase: emphasis on authority, supervision, discipline and productivity in formal industrial settings.
- Human relations and welfare orientation: greater attention to employee needs, working conditions, relationships and morale.
- Behavioural and professional development phase: use of motivation, leadership, training and group dynamics to understand workplace behaviour.
- Contemporary phase: focus on globalisation, technology, diversity, employee engagement, work-life balance and organisational change.
- The phases indicate a gradual shift from control-centred management towards employee-centred and adaptive approaches.

Quick revision: The source gives a broad phase-wise account; use its headings and examples when reproducing the exact phase labels in an exam.

6. Work Motivation and Its Characteristics

Meaning — Work motivation is the internal and external force that initiates, directs and sustains effort towards work goals.

Key points and explanations

- Direction: guides effort towards a particular goal or task.
- Intensity: amount of energy or effort an employee invests.
- Persistence: continuation of effort despite obstacles or delays.
- Individual variability: employees differ according to needs, values and circumstances.
- Dynamic nature: motivation changes with workload, feedback, life events and work conditions.
- Sources/types: intrinsic motivation (interest and personal satisfaction) and extrinsic motivation (salary, recognition and other external outcomes).
- Organisational implication: align employee goals with organisational goals and adapt motivational methods to individuals.

Quick revision: Direction + intensity + persistence; motivation varies and changes over time.

7. Organisational Commitment and Its Components

Meaning — Organisational commitment refers to an employee's psychological attachment to, involvement in and willingness to remain with an organisation.

Key points and explanations

- Affective commitment: emotional attachment; the employee stays because they want to.
- Continuance commitment: commitment based on the perceived costs of leaving; the employee stays because they need to.
- Normative commitment: sense of duty or obligation; the employee stays because they feel they ought to.
- Commitment may be strengthened by supportive leadership, fair treatment, recognition, job satisfaction and opportunities for growth.

Quick revision: Affective = want to; continuance = need to; normative = ought to.

8. Steps and Components of Conflict Resolution

Meaning — Conflict resolution is the process of addressing disagreements constructively so that individuals or groups can reach workable solutions.

Key points and explanations

- Identify the conflict and define the issue clearly.
- Listen to all parties and understand their perspectives, interests and underlying causes.
- Encourage open communication and maintain a respectful, non-threatening discussion.
- Generate possible solutions and evaluate them fairly.
- Negotiate or mediate to reach an acceptable agreement; clarify responsibilities and timelines.
- Implement the agreement and follow up to assess whether the conflict has been resolved.
- Important components include communication, active listening, empathy, impartiality, negotiation, collaboration and follow-up.

Quick revision: Identify → understand → communicate → generate options → agree → implement → review.

9. Vroom’s Expectancy Theory

Meaning — Victor Vroom’s theory explains motivation through an employee’s beliefs about effort, performance and valued outcomes.

Key points and explanations

- Expectancy: belief that effort will lead to the required performance; supported by ability, training and resources.
- Instrumentality: belief that performance will lead to a reward or outcome; supported by fair and reliable reward systems.
- Valence: value or attractiveness of the reward to the employee.
- Conceptual relationship: motivation depends on the combined strength of expectancy, instrumentality and valence.
- Managers should provide training and resources, make performance-reward links clear and offer rewards employees value.
- Limitation noted in the source: it assumes relatively rational decision-making and may understate emotional and cultural influences.

Quick revision: E-I-V: effort→performance; performance→outcome; value of outcome.

10. Social Learning Theory

Meaning — Albert Bandura’s Social Learning Theory explains that people learn behaviour by observing and modelling others, as well as through reinforcement and cognitive processes.

Key points and explanations

- Observation: noticing a model such as a supervisor or experienced colleague.
- Imitation: reproducing the observed behaviour.
- Reinforcement: direct, vicarious (seeing another person rewarded) or self-reinforcement can influence whether behaviour continues.
- Cognitive processes: attention, retention and motivation are needed for observational learning.
- Modelling: leaders and peers influence workplace norms, skills and attitudes.
- The source refers to Bandura’s Bobo Doll experiment (1961) as evidence of observational learning.
- Workplace application: supervisors can model punctuality, collaboration, safe practices and effective communication.

Quick revision: Observation, imitation, reinforcement; attention, retention, motivation.

11. 12 C’s for Team Building

Meaning — The 12 C’s are presented as a framework for building cohesive, productive and resilient teams.

Key points and explanations

- The source groups team-building principles around clear direction, skills, relationships and effective work practices. Key Cs covered include: clear goals/clarity, competence, communication, cooperation/collaboration, coordination, commitment, creativity, consistency, conflict management, consideration, control and continuous improvement.
- Clear goals align members; competence ensures the required skills; communication supports information sharing; cooperation and coordination integrate efforts.
- Commitment sustains effort; creativity supports new solutions; consistency builds reliability; conflict management addresses disagreements constructively.
- Consideration respects different perspectives; control maintains focus and accountability; continuous improvement uses review and learning to strengthen performance.
- Practical application: combine clear goals, skilled members, regular communication, trust and review. Over-control can restrict creativity.

Quick revision: Revise the 12 Cs as a checklist; apply them together rather than relying on one principle.

12. Phases of Motivation to Increase Morale and Productivity

Meaning — The source presents motivation as a cycle of assessment, goal setting, engagement, reinforcement and evaluation.

Key points and explanations

- Assessment: identify employee needs, strengths, barriers and causes of low morale using surveys or discussions.
- Goal setting: establish clear, realistic SMART goals (Specific, Measurable, Achievable, Relevant, Time-bound).
- Engagement: create intrinsic and extrinsic motivation through autonomy, meaningful work, rewards and supportive communication.
- Reinforcement: strengthen desirable behaviour through praise, recognition, rewards or removal of an unpleasant condition when appropriate.
- Evaluation: assess morale and productivity, gather feedback and adjust the strategy.
- The phases are interconnected; evaluation informs a new cycle of assessment.

Quick revision: Assessment → goal setting → engagement → reinforcement → evaluation.

13. Management and Various Functions of Management

Meaning — Management is the process of using human, financial and material resources to achieve organisational goals efficiently and effectively.

Key points and explanations

- Planning: set objectives and decide strategies and actions; reduces uncertainty.
- Organising: arrange resources, structure teams, assign roles and coordinate tasks.
- Leading: guide, communicate with, inspire and motivate employees towards goals.
- Controlling: set standards, measure performance, identify deviations and take corrective action.
- The functions form a continuous cycle: planning sets direction, organising prepares resources, leading drives action and controlling evaluates results.

Quick revision: POLC: Planning, Organising, Leading, Controlling.

14. Behaviour Intervention Plans and Steps of OBM Programme

Meaning — A Behaviour Intervention Plan (BIP) is a structured plan to modify specific problematic behaviours. Organisational Behaviour Management (OBM) applies behavioural principles to improve workplace performance.

Key points and explanations

- BIP steps: identify and define problematic behaviour in measurable terms; analyse causes and triggers using the Antecedent-Behaviour-Consequence (ABC) model; set measurable goals; develop reinforcement, coaching, feedback, training or environmental strategies; implement; monitor and adjust; evaluate effectiveness.
- OBM programme steps: pinpoint target behaviours; measure baseline performance; develop performance interventions; implement and train employees/managers; monitor and provide feedback using indicators; sustain successful changes and evaluate periodically.
- BIP focuses on an individual's or group's target behaviour plan; OBM is the broader application of behavioural principles across workplace systems.

Quick revision: BIP: define → analyse ABC → goals → strategies → implement → monitor → evaluate.

15. Various Methods to Create an Effective Team

Meaning — An effective team works collaboratively towards shared goals and supports productivity, innovation and morale.

Key points and explanations

- Clear goal setting: use SMART goals and review progress.
- Strong leadership: provide direction, support and participative decision-making.
- Effective communication: encourage transparent discussion and regular updates.
- Defined roles and responsibilities: allocate work according to strengths and clarify accountability.
- Trust and collaboration: create psychological safety, teamwork and recognition.
- Diversity and inclusion: value different skills, backgrounds and perspectives.
- Conflict resolution: use mediation, discussion, active listening and constructive feedback.
- Continuous learning: provide training, upskilling and cross-functional learning.
- Recognition and rewards: acknowledge individual and team contributions.
- Adaptability and flexibility: encourage openness to change and suitable flexible arrangements.

Quick revision: Goals, leadership, communication, roles, trust, inclusion, conflict resolution, learning, rewards, adaptability.

16. Difference Between Organisational Behaviour and Organisational Psychology

Meaning — Both fields study people at work, but organisational behaviour is broader and multidisciplinary, while organisational psychology applies psychological principles more specifically.

Key points and explanations

- Organisational Behaviour (OB): studies how individuals, groups and structures affect behaviour in organisations; draws on psychology, sociology and management; focuses on group dynamics, leadership, communication, culture and overall organisational effectiveness.
- Organisational Psychology (OP): a specialised branch of psychology applying psychological theories and research to work; focuses on individual cognition, emotion, motivation, well-being, performance and job satisfaction.
- OB commonly examines organisational systems, structures, power and team performance. OP more directly examines psychological processes and employee-level outcomes.
- Both aim to improve workplace functioning and employee outcomes; their approaches overlap.

Quick revision: OB = multidisciplinary and organisation-wide; OP = psychology-based and employee-focused.

17. Goals of Organisational Behaviour

Meaning — Organisational Behaviour aims to understand, predict and influence workplace behaviour to improve individual, group and organisational outcomes.

Key points and explanations

- Understand employee behaviour, attitudes and performance.
- Predict how individuals and groups may respond to organisational situations.
- Influence behaviour constructively through leadership, motivation, communication and work design.
- Improve productivity, efficiency, job satisfaction, morale and organisational effectiveness.
- Support teamwork, reduce conflict and strengthen organisational culture.

Quick revision: Understand, predict and influence behaviour; improve effectiveness and satisfaction.

18. Compare and Contrast: Models of Organisational Behaviour

Meaning — The four models differ in the basis of management authority, employee motivation and the resulting workplace climate.

Key points and explanations

- Autocratic: basis is power/authority; employees comply; may be useful in emergencies but risks low morale and creativity.
- Custodial: basis is economic resources and security; employees depend on benefits; can improve retention but may encourage passivity.
- Supportive: basis is leadership and support; employees are encouraged to perform; can improve engagement and creativity.
- Collegial: basis is partnership; employees share responsibility and self-discipline; strengthens teamwork but consensus can slow decisions.
- Choice depends on the work, employee maturity, organisational culture and goals; managers may combine approaches.

Quick revision: Compare on basis, employee orientation, motivation, advantages and limitations.

19. Organisational Behaviour Adopts a Cross-Cultural Approach

Meaning — A cross-cultural approach recognises that cultural values influence communication, leadership, motivation and workplace relationships.

Key points and explanations

- Workforce diversity: integrate employees from different cultural backgrounds and perspectives.
- Communication: recognise direct and indirect communication styles to reduce misunderstanding.
- Leadership and decision-making: cultures may differ in individualism, assertiveness, hierarchy and consensus.
- Motivation and work ethics: collectivist settings may emphasise group goals, while individualistic settings may emphasise personal achievement.
- Supporting theories: Hofstede's Cultural Dimensions Theory; Trompenaars' Cultural Model; GLOBE Project.
- Applications: cross-cultural training, inclusive policies and adaptive management of global teams.

Quick revision: Culture influences communication, leadership, motivation and teamwork.

20. Differences Between Primary and Secondary Motives

Meaning — Primary motives are innate biological needs, while secondary motives are learned through social and cultural experience.

Key points and explanations

- Primary motives: physiological and survival-related; examples include hunger, thirst, sleep, avoidance of pain and reproduction.
- Secondary motives: acquired through learning and social experience; examples include achievement, power, affiliation, status and recognition.
- Primary motives are relatively universal and stable; secondary motives vary across people and are shaped by upbringing, education and culture.
- Workplace relevance: primary needs are addressed through safety, rest and basic conditions; secondary motives through recognition, promotion, achievement and career growth.

Quick revision: Primary = innate/biological; secondary = learned/social.

21. Quality Control Circles (QCCs)

Meaning — QCCs are small voluntary groups of employees who identify, analyse and solve work-related problems to improve quality and productivity.

Key points and explanations

- Objectives: improve quality, reduce waste, encourage participation, strengthen teamwork, foster innovation and improve morale.
- Structure: members (employees), facilitator (guides the group), leader (coordinates activities) and management support (helps implement solutions).
- Process: form the circle; identify a problem; collect and analyse data; develop solutions; implement feasible changes; evaluate and follow up.
- Benefits: employee involvement, collaboration, motivation, cost reduction, efficiency and continuous improvement.

Quick revision: Voluntary small group + problem-solving + quality improvement.

22. Features of Job Satisfaction

Meaning — Job satisfaction is the degree of contentment employees feel about their work and influences motivation, performance and well-being.

Key points and explanations

- Work environment: safe, clean and supportive conditions.
- Compensation and benefits: fair pay, insurance, bonuses and incentives.
- Job security: stability and confidence in continued employment.
- Work-life balance: flexible hours, remote options and leave policies.
- Recognition and rewards: appreciation, awards and promotion.
- Career growth: training, skill development and advancement opportunities.
- Autonomy and responsibility: control over tasks and meaningful duties.
- Leadership and management: supportive, transparent guidance, feedback and communication.

Quick revision: Environment, pay, security, balance, recognition, growth, autonomy, leadership.

23. Organisational Behaviour Management (OBM)

Meaning — OBM applies behavioural psychology principles to improve workplace performance, employee engagement and organisational efficiency.

Key points and explanations

- Behavioural analysis: identify important behaviours and use data to understand performance.
- Performance management: set goals, evaluate results and use feedback and corrective action.
- Reinforcement strategies: reward desirable behaviour and address inefficient practices.
- Training and development: build skills and support continuous learning.
- Workplace culture and motivation: promote teamwork, communication, leadership and job satisfaction.
- Implementation: identify key behaviours; measure performance; develop interventions; implement and monitor; evaluate and modify.
- Benefits: engagement, productivity, efficiency, reduced conflict and absenteeism, stronger teamwork.

Quick revision: Analyse behaviour, measure, intervene, monitor and evaluate.

24. Kinds of Work Schedules

Meaning — A work schedule specifies the days and hours employees are expected to work.

Key points and explanations

- Fixed: same hours and days each week; predictable but less flexible.
- Flexible: employees have some choice over working hours; supports work-life balance but requires self-discipline.
- Shift: different groups cover morning, evening or night periods; common in continuous services and may affect sleep.
- Compressed: longer daily hours over fewer days; provides longer breaks but may cause fatigue.
- Part-time: fewer hours than full-time work; flexible but may offer fewer benefits or less security.
- Rotating: employees periodically change shifts; requires adaptability and may disrupt routines.
- On-call: employees are available when needed; unpredictable hours.
- Freelance/contract: hours organised around projects and deadlines; autonomy but potentially inconsistent income.

Quick revision: Know definition, features, advantages and limitations of all eight schedules.

25. Job Characteristic Model of Work Motivation

Meaning — Hackman and Oldham's Job Characteristic Model (1976) explains how job design affects intrinsic motivation, satisfaction and performance.

Key points and explanations

- Five core characteristics: skill variety (different skills); task identity (complete identifiable work); task significance (impact on others); autonomy (independence); feedback (information about performance).
- Three psychological states: experienced meaningfulness (skill variety, task identity and significance); experienced responsibility (autonomy); knowledge of results (feedback).
- Outcomes: higher intrinsic motivation, job satisfaction and performance, with lower absenteeism and turnover.
- Applications: job enrichment, employee empowerment and regular feedback mechanisms.

Quick revision: Five characteristics → three psychological states → positive work outcomes.

26. Work Motivation: Intrinsic and Extrinsic Motivation

Meaning — Work motivation consists of internal and external forces that drive employees towards job-related goals.

Key points and explanations

- Intrinsic motivation: comes from interest, enjoyment, curiosity, mastery and personal fulfilment. Examples: solving a difficult problem because it is satisfying or learning a new skill.
- Extrinsic motivation: comes from external rewards or consequences such as salary, promotion, recognition or avoiding punishment.
- Intrinsic motivation is often associated with creativity and job satisfaction; extrinsic motivation can support compliance and goal completion but may depend on continued incentives.
- Organisations should balance both: provide meaningful work and autonomy alongside fair rewards and recognition.

Quick revision: Intrinsic = internal satisfaction; extrinsic = external reward/consequence.

27. Organisational Commitment: Nature and Components

Meaning — Organisational commitment describes the employee's attachment to the organisation and willingness to remain part of it.

Key points and explanations

- Affective commitment: emotional attachment and identification with the organisation; stay because they want to.
- Continuance commitment: awareness of the costs of leaving; stay because they need to.
- Normative commitment: feeling of responsibility or obligation; stay because they ought to.
- The three components differ in emotional attachment, perceived cost and moral obligation.

Quick revision: Three-component model: affective, continuance and normative.

28. Herzberg's Hygiene Factor Theory

Meaning — Herzberg's theory distinguishes factors that prevent dissatisfaction from factors that create positive job satisfaction.

Key points and explanations

- Motivational factors (intrinsic): achievement, recognition, work itself, responsibility, advancement and growth. Their presence can increase satisfaction.
- Hygiene factors (extrinsic): salary, company policy, supervision, relationships, working conditions and job security. Their absence can cause dissatisfaction; their presence does not automatically create strong motivation.
- Management implication: remove sources of dissatisfaction and enrich jobs with responsibility, achievement and growth.

Quick revision: Hygiene prevents dissatisfaction; motivators create satisfaction.

29. Maslow’s Hierarchy of Needs

Meaning — Maslow proposed that human needs can be arranged in five levels, from basic survival needs to personal growth.

Key points and explanations

- Physiological: food, water, rest and basic pay.
- Safety: security, protection, stable employment and safe working conditions.
- Love and belongingness: friendship, relationships, teamwork and acceptance.
- Esteem: respect, status, recognition and achievement.
- Self-actualisation: personal growth, creativity and realising potential.
- Workplace implication: provide fair basic conditions and security while also supporting belonging, recognition and development.

Quick revision: Physiological → safety → belongingness → esteem → self-actualisation.

30. Types of Organisations

Meaning — An organisation is a structured group of people working together to achieve common goals; types can be classified by purpose, ownership and structure.

Key points and explanations

- Business/for-profit: aims to generate profit; examples include sole proprietorships, partnerships, corporations and limited-liability companies.
- Non-profit: serves social, cultural, educational or charitable purposes rather than distributing profit; examples include charities and educational institutions.
- Government/public sector: operated or funded by government to provide public services, such as hospitals, schools and agencies.
- Cooperative: owned and operated by members with shared interests, such as worker or consumer cooperatives.
- Hybrid: combines revenue generation with a social purpose, such as a social enterprise.

Quick revision: Classify by purpose, ownership and structure.

31. Principles of Managing Change

Meaning — Change management plans and guides organisational transitions while reducing resistance and supporting adaptation.

Key points and explanations

- Clear vision and objectives: explain the purpose and align change with organisational strategy.
- Effective communication: provide transparent, consistent information and address concerns.
- Employee involvement: invite participation and feedback to build commitment.
- Strong leadership and support: guide employees and provide resources.
- Training and skill development: prepare employees for new systems and processes.
- Managing resistance: identify concerns and encourage adaptability.
- Monitoring and evaluation: assess outcomes and adjust the change process.

Quick revision: Vision, communication, involvement, leadership, training, resistance management, evaluation.

32. Scope of Organisational Psychology

Meaning — Organisational psychology applies psychological principles to work in order to improve employee well-being and organisational efficiency.

Key points and explanations

- Recruitment and selection: design hiring and assessment methods and improve person-job fit.
- Motivation and job satisfaction: understand factors affecting engagement and satisfaction.
- Leadership and management development: study leadership styles and improve managerial skills.
- Training and development: design and evaluate learning programmes.
- Organisational culture and work environment: promote teamwork, innovation, diversity and inclusion; address stress.
- Performance evaluation and productivity: develop fair appraisal systems and improve effectiveness.

Quick revision: Selection, motivation, leadership, training, culture, performance.

33. Reinforcement Theory of Motivation

Meaning — B.F. Skinner's Reinforcement Theory states that behaviour is influenced by its consequences.

Key points and explanations

- Positive reinforcement: add a desirable consequence to strengthen behaviour; e.g., praise, bonus or promotion.
- Negative reinforcement: remove an unpleasant condition after desired behaviour to strengthen it; e.g., reduce close supervision after reliable performance.
- Punishment: apply an unpleasant consequence to reduce undesirable behaviour; e.g., warning or demotion.
- Extinction: stop reinforcing a behaviour so that it gradually decreases; e.g., no longer giving attention to attention-seeking conduct.
- Workplace use: reinforce productive behaviour, shape performance through feedback and reduce undesirable actions fairly.

Quick revision: Negative reinforcement is not punishment: it removes an unpleasant condition to strengthen behaviour.

34. Leadership and Factors of Leadership

Meaning — Leadership is the ability to influence, guide and motivate individuals or teams towards common goals.

Key points and explanations

- Vision and strategy: provide direction and align team effort with organisational goals.
- Communication skills: express ideas clearly, listen actively and encourage open dialogue.
- Decision-making: analyse situations, consider alternatives and assess risks and long-term effects.
- Emotional intelligence: understand and manage emotions and empathise with others.
- Integrity and ethics: act honestly and fairly to build trust.
- Adaptability and innovation: respond to change and encourage creative problem-solving.
- Motivation and inspiration: empower employees, recognise contributions and create a positive culture.

Quick revision: Vision, communication, decision-making, emotional intelligence, integrity, adaptability, motivation.

Final revision checklist

- ■ Know the definitions and theorists: Maslow, Herzberg, Vroom, McClelland, Bandura, Morgan, Hackman & Oldham, and Skinner.
- ■ Practise comparisons: OB vs Organisational Psychology; primary vs secondary motives; intrinsic vs extrinsic motivation; four OB models.
- ■ Memorise sequences: Maslow's five needs; Vroom's E-I-V; management functions (POLC); motivation phases; BIP/OBM steps; QCC process.
- ■ Prepare examples from workplace settings for motivation, leadership, team building, job satisfaction, reinforcement and change management.
- ■ Where a topic in this PDF is broad or gives limited detail, consult the relevant IGNOU block before writing a detailed long answer.

Prepared as a concise revision aid from the user-provided source PDF. Verify exact syllabus coverage and prescribed terminology against IGNOU materials where available.
